Avalanche danger

region C

Level 1, low

Snow drifts

The early morning will see favourable conditions over a wide area, but the avalanche danger will increase later. High altitudes: In the afternoon a moderate avalanche danger will prevail.

As a consequence of the sometimes strong wind clearly visible snow drift accumulations will form. These are rather small but can be released easily. Restraint should be exercised because avalanches can sweep people along and give rise to falls.

Full-depth avalanches

More full-depth avalanches are possible. This applies in all aspects. Caution is to be exercised in areas with glide cracks.
