

Stormy weather and fresh snow: High avalanche danger will be encountered in some regions

Edition: 17.1.2018, 08:00 / Next update: 17.1.2018, 17:00

Avalanche danger

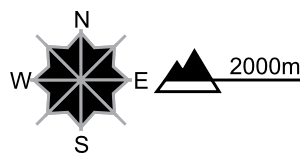

region F

Level 2, moderate

Snow drifts, old snow

Avalanche prone locations

Danger description

As a consequence of the sometimes storm force wind snow drift accumulations will form. The number and size of avalanche prone locations will increase with altitude. Additionally in very isolated cases avalanches can also be released in the old snowpack, especially on very steep west, north and east facing slopes. Careful route selection is recommended.

Full-depth avalanches

Individual full-depth avalanches are possible. Caution is to be exercised in areas with glide cracks.
