

Stormy weather and fresh snow: In the west and in the north a high avalanche danger will be encountered over a wide area

Edition: 17.1.2018, 17:00 / Next update: 18.1.2018, 08:00

Avalanche danger

region B

Level 4, high

Fresh snow and snow drifts

Avalanche prone locations

Danger description

The danger exists primarily in alpine snow sports terrain. As a consequence of fresh snow and stormy weather large snow drift accumulations have formed. They are lying on the unfavourable surface of an old snowpack on west to north to east facing aspects. Avalanches can be released very easily or triggered naturally. They can reach medium size. Individual large avalanches are possible. Exposed parts of transportation routes can be endangered. Snow sport activities outside marked and open pistes call for extensive experience in the assessment of avalanche danger and great restraint.

Full-depth avalanches

More full-depth avalanches are possible. This applies in all aspects below approximately 2200 m. Caution is to be exercised in areas with glide cracks. Slides are to be expected on cut slopes.

Danger levels

1 low

2 moderate

3 consider.

4 high

5 very high
