

Stormy weather and fresh snow: In the west and in the north a high avalanche danger will be encountered over a wide area

Edition: 17.1.2018, 17:00 / Next update: 18.1.2018, 08:00

Avalanche danger

region C

Level 3, considerable

Fresh snow and snow drifts

Avalanche prone locations

Danger description

As a consequence of fresh snow and stormy weather snow drift accumulations have formed. They are lying on the unfavourable surface of an old snowpack on west to north to east facing aspects. Avalanches can be released very easily and reach medium size. Natural avalanches are to be expected. Snow sport activities outside marked and open pistes call for extensive experience in the assessment of avalanche danger.

Full-depth avalanches

More full-depth avalanches are possible. This applies in all aspects below approximately 2200 m. Caution is to be exercised in areas with glide cracks.

Danger levels

1 low

2 moderate

3 consider.

4 high

5 very high
