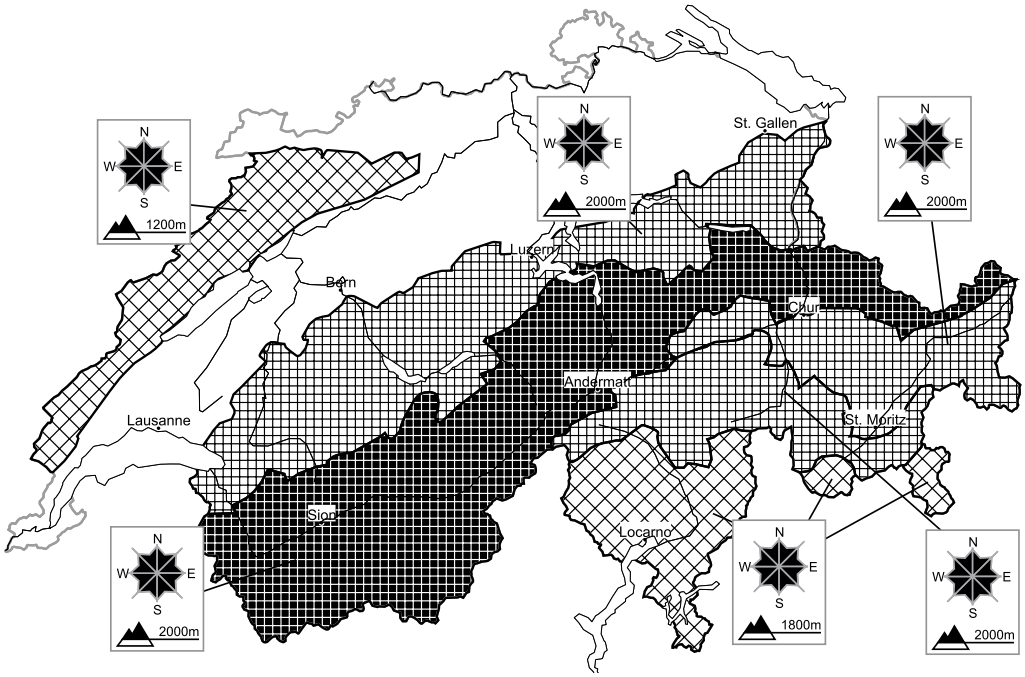
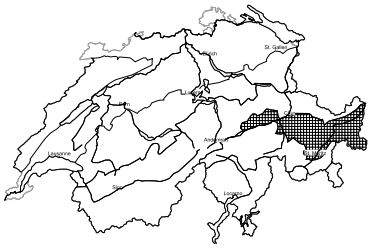
Avalanche danger

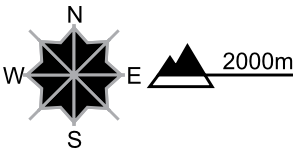


region C | **Level 4, high**



Fresh snow and snow drifts, old snow

Avalanche prone locations



Danger description

The fresh snow and snow drift accumulations are prone to triggering. Avalanches can be released very easily. Medium-sized and, in isolated cases, large natural avalanches are to be expected. Exposed parts of transportation routes are endangered. Safety measures are to be reviewed. Snow sport activities outside marked and open pistes call for extensive experience in the assessment of avalanche danger and great restraint.

Full-depth avalanches

More frequent full-depth avalanches are to be expected, including quite large ones. This applies in all aspects below approximately 2200 m. Caution is to be exercised in areas with glide cracks. Slides are to be expected on cut slopes.

Danger levels 1 low 2 moderate 3 consider. 4 high 5 very high
