Avalanche danger

region A

Level 5, very high

Fresh snow and snow drifts, old snow

Avalanche prone locations

Danger description

The fresh snow and snow drift accumulations are prone to triggering. A large number of natural avalanches are to be expected. They can be triggered in deep layers and reach very large size. The avalanches can reach a very long way. Exposed settlements and transportation routes are endangered in the majority of cases. Extensive safety measures are recommended. Without question, it is inadvisable to engage in snow sport activities outside marked and open pistes.

Wet and full-depth avalanches

As a consequence of the rain wet avalanches are to be expected. More frequent full-depth avalanches are to be expected, including quite large ones. This applies in all aspects below approximately 2200 m.
