

Very high avalanche danger will be encountered over a wide area

Edition: 22.1.2018, 17:00 / Next update: 23.1.2018, 08:00

Avalanche danger

region E **Level 3, considerable**

Fresh snow and snow drifts

Avalanche prone locations

Danger description

The fresh snow and snow drift accumulations are in some cases still prone to triggering at elevated altitudes. Winter sport participants can release avalanches, including dangerously large ones. Ski touring and snowshoe hiking call for experience in the assessment of avalanche danger.

Wet and full-depth avalanches

As a consequence of the rain wet avalanches are to be expected. This applies in particular during the night. At any time full-depth avalanches are possible, including quite large ones. This applies in all aspects.
