

Considerable avalanche danger will be encountered over a wide area

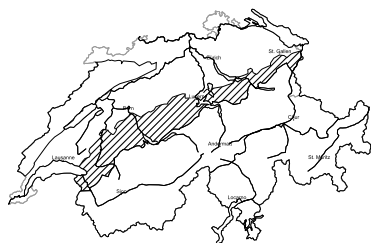

Edition: 24.1.2018, 08:00 / Next update: 24.1.2018, 17:00

Avalanche danger

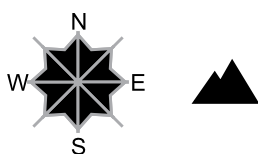

region C

Level 2, moderate

Full-depth avalanches

Avalanche prone locations

Danger description

In all aspects full-depth avalanches are to be expected, including quite large ones. They can be released at any time of day or night. Areas with glide cracks are to be avoided as far as possible.

Fresh snow and snow drifts

The fresh snow and snow drift accumulations of the last few days are in some cases still prone to triggering at elevated altitudes. This applies in particular in case of a large load. Caution is to be exercised at transitions from a shallow to a deep snowpack.
