Avalanche danger

region A

Level 3, considerable

Fresh snow and snow drifts, old snow

Avalanche prone locations

Danger description

The fresh snow and snow drift accumulations of the last few days are in some cases prone to triggering. Whumpung sounds and the formation of shooting cracks when stepping on the snowpack can indicate the danger. Avalanches can be released, even by a single winter sport participant. They can penetrate deep layers and reach dangerously large size. Snow sport activities outside marked and open pistes call for extensive experience in the assessment of avalanche danger.

Full-depth avalanches

Below approximately 2200 m full-depth avalanches are to be expected. This applies in particular on steep east, south and west facing slopes. They can be released at any time of day or night. Areas with glide cracks are to be avoided as far as possible.
