

# At elevated altitudes a considerable avalanche danger will prevail. Full-depth avalanches on steep grassy slopes

Edition: 25.1.2018, 08:00 / Next update: 25.1.2018, 17:00

## Avalanche danger

### region C

### Level 2, moderate

### Full-depth avalanches

#### Avalanche prone locations

#### Danger description

On steep grassy slopes full-depth avalanches are to be expected, including quite large ones. They can be released at any time of day or night. Areas with glide cracks are to be avoided as far as possible.

### Fresh snow and snow drifts

The fresh snow and snow drift accumulations of the last few days are in some cases still prone to triggering at elevated altitudes. This applies in particular in case of a large load. Caution is to be exercised at transitions from a shallow to a deep snowpack. Fresh snow drift accumulations are mostly small but can be released easily. They are to be evaluated with care and prudence in steep terrain.

#### Danger levels

1 low

2 moderate

3 consider.

4 high

5 very high
