

Considerable avalanche danger will be encountered in some regions. Full-depth avalanches on steep grassy slopes

Edition: 25.1.2018, 17:00 / Next update: 26.1.2018, 08:00

Avalanche danger

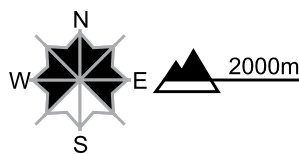

region D

Level 2, moderate

Old snow, snow drifts

Avalanche prone locations

Danger description

The near-surface layers of the snowpack can be released especially by large additional loads. Caution is to be exercised in areas where the snow cover is rather shallow. Defensive route selection is recommended. As the day progresses small snow drift accumulations will form, in particular at high altitudes and in high Alpine regions. These are to be avoided in very steep terrain.

Full-depth avalanches

Below approximately 2200 m full-depth avalanches are possible. This applies in particular on steep east, south and west facing slopes. They can be released at any time of day or night. Areas with glide cracks are to be avoided as far as possible.

Danger levels

1 low

2 moderate

3 consider.

4 high

5 very high
