

Fresh snow drifts require caution. Slight increase in avalanche danger as the day progresses

Edition: 1.2.2018, 08:00 / Next update: 1.2.2018, 17:00

Avalanche danger

region A

Level 2, moderate

Fresh snow and snow drifts

Avalanche prone locations

Danger description

As a consequence of fresh snow and wind mostly small snow drift accumulations will form. These will be deposited on the unfavourable surface of an old snowpack on shady slopes. The number and size of avalanche prone locations will increase as the day progresses. The snow drift accumulations can be released easily. They are to be avoided in steep terrain.

Full-depth avalanches

Small and medium-sized full-depth avalanches are possible. They can be released at any time of day or night. Areas with glide cracks are to be avoided.

Danger levels

1 low

2 moderate

3 consider.

4 high

5 very high
