

# Fresh snow drifts require caution. Slight increase in avalanche danger as the day progresses

Edition: 1.2.2018, 08:00 / Next update: 1.2.2018, 17:00

## Avalanche danger

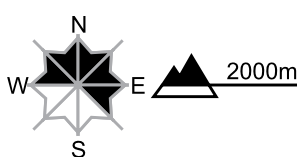

**region C**

**Level 2, moderate**

### Snow drifts

#### Avalanche prone locations

#### Danger description

As a consequence of fresh snow and wind small snow drift accumulations will form. These will be deposited on the unfavourable surface of an old snowpack on shady slopes. The snow drift accumulations can be released easily. They are to be avoided in very steep terrain.

### Full-depth avalanches

Small and medium-sized full-depth avalanches are possible. They can be released at any time of day or night. Areas with glide cracks are to be avoided.

**Danger levels**

1 low

2 moderate

3 consider.

4 high

5 very high
