

## Snow drifts require caution

Edition: 2.2.2018, 17:00 / Next update: 3.2.2018, 08:00

### Avalanche danger

**region A** **Level 2, moderate**

#### Snow drifts

##### Avalanche prone locations

##### Danger description

As a consequence of fresh snow and wind snow drift accumulations have formed. These are lying on the unfavourable surface of an old snowpack on shady slopes. Fresh snow and snow drift accumulations can be released by a single winter sport participant. The snow drift accumulations are to be avoided in steep terrain. Backcountry touring calls for careful route selection.

#### Full-depth avalanches

Individual small and medium-sized full-depth avalanches are possible. They can be released at any time of day or night. Areas with glide cracks are to be avoided as far as possible.

Danger levels

1 low

2 moderate

3 consider.

4 high

5 very high
