

## Snow drifts require caution

Edition: 2.2.2018, 17:00 / Next update: 3.2.2018, 08:00

### Avalanche danger

**region B**

**Level 2, moderate**

#### Snow drifts

##### Avalanche prone locations

##### Danger description

As a consequence of the northerly wind snow drift accumulations will form. These are mostly small but can be released easily. The number and size of avalanche prone locations will increase as the day progresses. The snow drift accumulations are to be avoided in steep terrain. Backcountry touring calls for careful route selection.

#### Full-depth avalanches

Individual small and medium-sized full-depth avalanches are possible. They can be released at any time of day or night. Areas with glide cracks are to be avoided as far as possible.

**Danger levels**

 1 low

 2 moderate

 3 consider.

 4 high

 5 very high
