

# A generally favourable avalanche situation will prevail

Edition: 7.2.2018, 17:00 / Next update: 8.2.2018, 08:00

## Avalanche danger

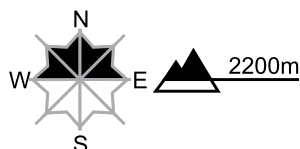

<b>region A</b>	<b>Level 2, moderate</b>
-----------------	--------------------------

### Snow drifts

#### Avalanche prone locations

#### Danger description

The mostly small snow drift accumulations of the last few days can still be released in some cases. The avalanche prone locations are to be found in particular adjacent to the ridge line and in pass areas and in gullies and bowls. The number and size of avalanche prone locations will increase with altitude. Apart from the danger of being buried, restraint should be exercised also in view of the danger of avalanches sweeping people along and giving rise to falls. Backcountry touring calls for meticulous route selection.

**Danger levels**

1 low

2 moderate

3 consider.

4 high

5 very high
