Avalanche danger

region C **Level 2, moderate**

Snow drifts

Avalanche prone locations

Danger description

The mostly small snow drift accumulations of the last few days are in some cases still prone to triggering. The avalanche prone locations are to be found in particular adjacent to the ridge line and in gullies and bowls. Apart from the danger of being buried, restraint should be exercised in particular in view of the danger of avalanches sweeping people along and giving rise to falls. Careful route selection is recommended.
