Avalanche danger

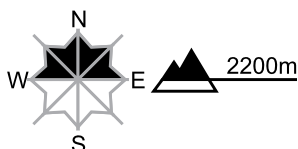

region A **Level 2, moderate**

Snow drifts

Avalanche prone locations

Danger description

The snow drift accumulations of the last few days are to be evaluated with care and prudence in particular on steep shady slopes and at elevated altitudes. Fresh snow drift accumulations are small but can in some cases be released easily. They are to be found adjacent to the ridge line and in pass areas in all aspects. Apart from the danger of being buried, restraint should be exercised also in view of the danger of avalanches sweeping people along and giving rise to falls. Careful route selection is recommended.
