

Outside marked and open pistes a considerable avalanche danger will be encountered over a wide area

Edition: 19.2.2018, 08:00 / Next update: 19.2.2018, 17:00

Avalanche danger

region A

Level 3, considerable

Fresh snow and snow drifts

Avalanche prone locations

Danger description

Fresh and somewhat older snow drift accumulations are prone to triggering. Single winter sport participants can release avalanches, including dangerously large ones. The avalanche prone locations are covered with fresh snow and difficult to recognise. Whumpung sounds and the formation of shooting cracks when stepping on the snowpack can indicate the danger. Snow sport activities outside marked and open pistes call for experience in the assessment of avalanche danger.

Full-depth avalanches

Full-depth avalanches are possible, especially on east, south and west facing slopes below approximately 2400 m as well as on north facing slopes below approximately 2000 m. Caution is to be exercised in areas with glide cracks.

Danger levels

1 low

2 moderate

3 consider.

4 high

5 very high
