

Considerable avalanche danger will be encountered in some regions

Edition: 21.2.2018, 08:00 / Next update: 21.2.2018, 17:00

Avalanche danger

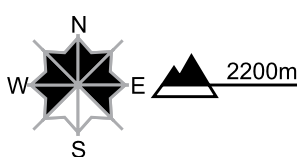

region A

Level 3, considerable

Snow drifts

Avalanche prone locations

Danger description

The somewhat older snow drift accumulations can be released by a single winter sport participant in some cases. The avalanche prone locations are covered with fresh snow and difficult to recognise. Isolated whumpung sounds can indicate the danger. Off-piste activities call for experience in the assessment of avalanche danger.

Full-depth avalanches

Individual full-depth avalanches are possible, especially on east, south and west facing slopes below approximately 2400 m as well as on north facing slopes below approximately 2000 m.
