

In southern Upper Valais a considerable avalanche danger will be encountered in some regions

Edition: 24.2.2018, 08:00 / Next update: 24.2.2018, 17:00

Avalanche danger

region F

Level 2, moderate

Snow drifts

Avalanche prone locations

Danger description

As a consequence of the Bise wind clearly visible snow drift accumulations have formed, in particular adjacent to the ridge line as well as in gullies and bowls, and behind abrupt changes in the terrain. The snow drift accumulations are mostly small. They are to be evaluated with care and prudence in very steep terrain. Apart from the danger of being buried, restraint should be exercised also in view of the danger of avalanches sweeping people along and giving rise to falls.

Danger levels

1 low

2 moderate

3 consider.

4 high

5 very high
