

Moderate avalanche danger will be encountered over a wide area

Edition: 25.2.2018, 17:00 / Next update: 26.2.2018, 08:00

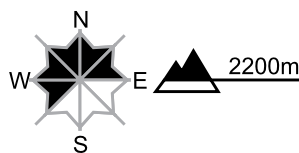

Avalanche danger

region E **Level 2, moderate**

Avalanche prone locations

Danger description

A mostly favourable avalanche situation will prevail. Weak layers in the upper part of the snowpack can be released by people in particular in little used backcountry terrain. These avalanche prone locations are very rare but barely recognisable, even to the trained eye. Meticulous route selection is appropriate. As a consequence of the northeasterly wind mostly small snow drift accumulations will form, in particular on south and west facing slopes at elevated altitudes. They are to be evaluated with care and prudence in very steep terrain.
