

Moderate avalanche danger will be encountered over a wide area

Edition: 26.2.2018, 17:00 / Next update: 27.2.2018, 08:00

Avalanche danger

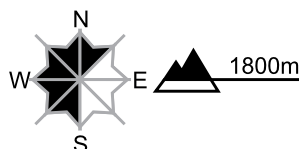

region A **Level 2, moderate**

Snow drifts

Avalanche prone locations

Danger description

As a consequence of the Bise wind snow drift accumulations have formed. These are small but in some cases prone to triggering. The snow drift accumulations are clearly recognisable to the trained eye. They are to be evaluated with care and prudence in steep terrain. Apart from the danger of being buried, restraint should be exercised also in view of the danger of avalanches sweeping people along and giving rise to falls.
