Avalanche danger

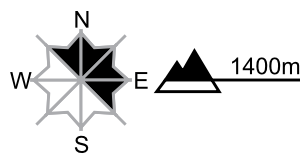

region E **Level 2, moderate**

Snow drifts

Avalanche prone locations

Danger description

As a consequence of the sometimes strong wind snow drift accumulations will form. These are small but can be released easily. The snow drift accumulations are to be evaluated with care and prudence in steep terrain. Apart from the danger of being buried, restraint should be exercised also in view of the danger of avalanches sweeping people along and giving rise to falls.

Wet avalanches as day progresses

On very steep sunny slopes individual small moist snow slides and avalanches are possible as a consequence of warming during the day and solar radiation.
