

In the west a considerable avalanche danger will be encountered in some regions

Edition: 6.3.2018, 08:00 / Next update: 6.3.2018, 17:00

Avalanche danger

region C

Level 2, moderate

Snow drifts, old snow

Avalanche prone locations

Danger description

The somewhat older snow drift accumulations represent the main danger. The avalanche prone locations are to be found in particular in gullies and bowls, and behind abrupt changes in the terrain. Mostly avalanches are small but easily released. The avalanche prone locations are sometimes covered with fresh snow and difficult to recognise. Backcountry touring and other off-piste activities call for careful route selection, especially on steep shady slopes.

Danger levels

1 low

2 moderate

3 consider.

4 high

5 very high
