

Slight increase in avalanche danger as a consequence of the snowfall

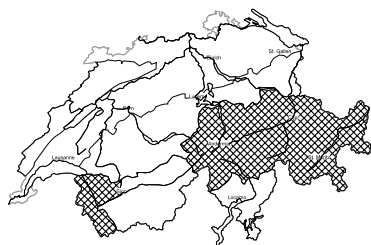

Edition: 6.3.2018, 17:00 / Next update: 7.3.2018, 08:00

Avalanche danger

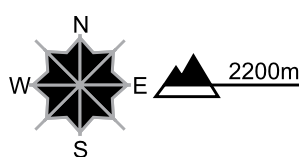

region A

Level 3, considerable

Fresh snow and snow drifts, old snow

Avalanche prone locations

Danger description

As a consequence of fresh snow and wind the snow drift accumulations will increase in size. The older snow drift accumulations remain prone to triggering. These avalanche prone locations are covered with fresh snow and therefore barely recognisable. Backcountry touring and other off-piste activities call for experience in the assessment of avalanche danger and careful route selection.
