

Slight increase in avalanche danger as a consequence of the snowfall

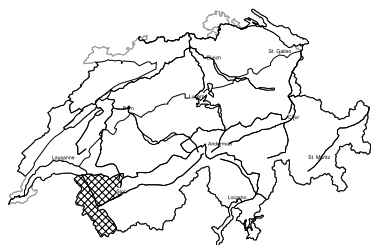

Edition: 7.3.2018, 08:00 / Next update: 7.3.2018, 17:00

Avalanche danger

region A

Level 3, considerable

Fresh snow and snow drifts, old snow

Avalanche prone locations

Danger description

The fresh and older snow drift accumulations are prone to triggering. Single winter sport participants can release avalanches, including medium-sized ones. The avalanche prone locations are sometimes covered with fresh snow and therefore barely recognisable. Backcountry touring and other off-piste activities call for experience in the assessment of avalanche danger and careful route selection.
