

Slight increase in avalanche danger as a consequence of the snowfall

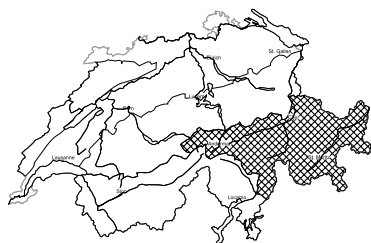

Edition: 7.3.2018, 08:00 / Next update: 7.3.2018, 17:00

Avalanche danger

region B

Level 3, considerable

Fresh snow and snow drifts, old snow

Avalanche prone locations

Danger description

The older snow drift accumulations remain prone to triggering. These avalanche prone locations are covered with fresh snow and therefore barely recognisable. As a consequence of fresh snow and wind further snow drift accumulations will form. The danger level 3 (considerable) will be reached in the late morning probably. Single winter sport participants can release avalanches. Backcountry touring and other off-piste activities call for experience in the assessment of avalanche danger and careful route selection.
