

Slight increase in avalanche danger as a consequence of the snowfall

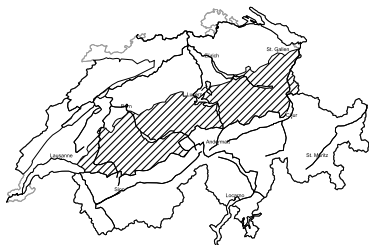

Edition: 7.3.2018, 08:00 / Next update: 7.3.2018, 17:00

Avalanche danger

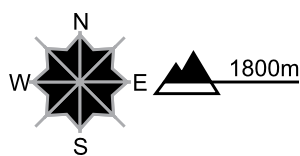

region C

Level 2, moderate

Fresh snow and snow drifts, old snow

Avalanche prone locations

Danger description

As a consequence of fresh snow and wind further snow drift accumulations will form. Fresh and older snow drift accumulations are mostly small but prone to triggering. The prevalence of avalanche prone locations will increase with altitude. Single winter sport participants can release avalanches. Backcountry touring and other off-piste activities call for careful route selection.
