

Considerable avalanche danger will be encountered in some regions

Edition: 8.3.2018, 17:00 / Next update: 9.3.2018, 08:00

Avalanche danger

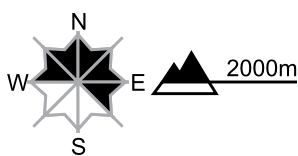

region C

Level 2, moderate

Snow drifts, old snow

Avalanche prone locations

Danger description

The more recent snow drift accumulations are mostly small but prone to triggering. The prevalence of avalanche prone locations will increase with altitude. Deeper layers of the snowpack can be released by a single winter sport participant in some places. Backcountry touring and other off-piste activities call for careful route selection.
