

# In the west and in the south a considerable avalanche danger will be encountered in some regions

Edition: 12.3.2018, 17:00 / Next update: 13.3.2018, 08:00

## Avalanche danger

### region C

### Level 3, considerable

#### Snow drifts, old snow

#### Avalanche prone locations

#### Danger description

The fresh and older snow drift accumulations are covered with fresh snow in some cases and therefore difficult to recognise. They are in many cases shallow and can in some cases be released easily. Deeper layers of the snowpack can be released by a single winter sport participant in some places. Caution is to be exercised on steep north facing slopes. Backcountry touring and other off-piste activities call for experience in the assessment of avalanche danger.

#### Full-depth avalanches

Below approximately 2400 m individual full-depth avalanches are possible, including quite large ones.

#### Danger levels

1 low

2 moderate

3 consider.

4 high

5 very high
