

In the west and in the south a considerable avalanche danger will prevail

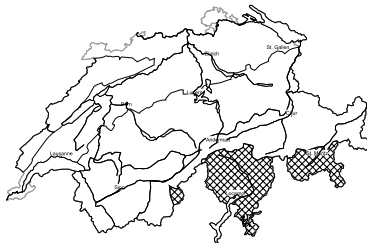

Edition: 13.3.2018, 08:00 / Next update: 13.3.2018, 17:00

Avalanche danger

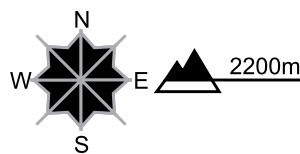

region B

Level 3, considerable

Fresh snow and snow drifts, old snow

Avalanche prone locations

Danger description

The fresh snow and snow drift accumulations are lying on the unfavourable surface of an old snowpack. Even single winter sport participants can release avalanches, including dangerously large ones. Individual natural avalanches are possible. Snow sport activities outside marked and open pistes call for experience in the assessment of avalanche danger and caution.

Wet and full-depth avalanches

Below approximately 2400 m individual full-depth and wet avalanches are possible.
