

# In the west and in the south a considerable avalanche danger will prevail

Edition: 13.3.2018, 08:00 / Next update: 13.3.2018, 17:00

## Avalanche danger

### region E

### Level 2, moderate

#### Snow drifts, old snow

#### Avalanche prone locations

#### Danger description

Fresh snow drift accumulations are mostly small and in some cases prone to triggering. The older snow drift accumulations can especially at their margins be released by people. The prevalence of avalanche prone locations and likelihood of triggering will increase with altitude.

Backcountry touring and other off-piste activities call for careful route selection.

#### Full-depth avalanches

Below approximately 2400 m full-depth avalanches are possible.

#### Danger levels

1 low

2 moderate

3 consider.

4 high

5 very high
