

Considerable avalanche danger will be encountered over a wide area

Edition: 17.3.2018, 08:00 / Next update: 17.3.2018, 17:00

Avalanche danger

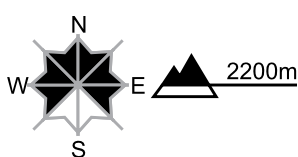

region C

Level 2, moderate

Old snow, snow drifts

Avalanche prone locations

Danger description

Weak layers in the upper part of the snowpack can be released by a single winter sport participant in some places. In particular adjacent to the ridge line and in pass areas snow drift accumulations have formed. These are mostly small but can be released easily. Snow sport activities outside marked and open pistes call for careful route selection.

Full-depth avalanches

Below approximately 2400 m individual full-depth avalanches are possible, including medium-sized ones. Caution is to be exercised in areas with glide cracks.
