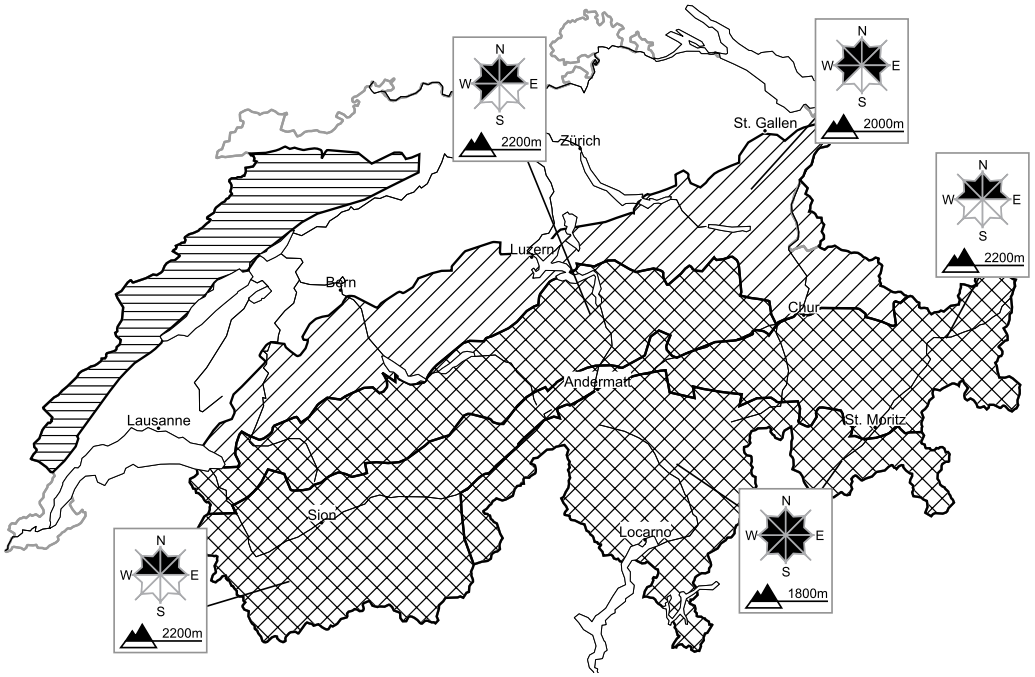
Avalanche bulletin through Monday, 19 March 2018

18.3.2018, 16:47

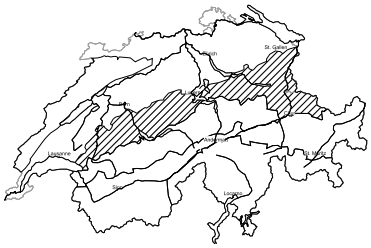
A critical avalanche situation will be encountered in some regions. Fresh snow drifts require caution

Edition: 18.3.2018, 17:00 / Next update: 19.3.2018, 08:00

Avalanche danger

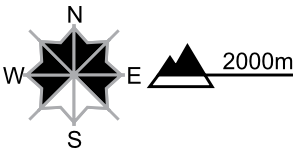


region D | **Level 2, moderate**



Snow drifts, old snow

Avalanche prone locations



Danger description

Old snow drift accumulations can be released, especially at their margins,. They are covered with fresh snow and therefore difficult to recognise. These avalanche prone locations are rather rare. Careful route selection is recommended.
Fresh snow drift accumulations will form in particular adjacent to the ridge line. They are mostly small but prone to triggering. Apart from the danger of being buried, restraint should be exercised also in view of the danger of avalanches sweeping people along and giving rise to falls.

Full-depth avalanches

Below approximately 2400 m individual full-depth avalanches are possible, including quite large ones. Caution is to be exercised in areas with glide cracks.

Danger levels 1 low 2 moderate 3 consider. 4 high 5 very high
