

# Considerable avalanche danger will be encountered in some regions. Snow drifts and weakly bonded old snow require caution

Edition: 22.3.2018, 08:00 / Next update: 22.3.2018, 17:00

## Avalanche danger

**region B**

**Level 3, considerable**

### Snow drifts, old snow

#### Avalanche prone locations

#### Danger description

As a consequence of the northeasterly wind snow drift accumulations have formed. These can be released by a single winter sport participant in some cases. Whumpung sounds and the formation of shooting cracks when stepping on the snowpack can indicate the danger. The prevalence of avalanche prone locations will increase with altitude.

In particular in little used backcountry terrain avalanches can be triggered in the old snow. They can reach medium size in isolated cases. These avalanche prone locations are rare but barely recognisable.

The current avalanche situation calls for experience in the assessment of avalanche danger and careful route selection.
