

Considerable avalanche danger will be encountered in some regions

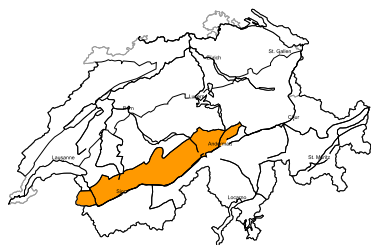

Edition: 23.3.2018, 08:00 / Next update: 23.3.2018, 17:00

Avalanche danger

region C

Level 3, considerable

Snow drifts

Avalanche prone locations

Danger description

The somewhat older snow drift accumulations can in some cases be released easily especially at their margins. They are to be evaluated with care and prudence in steep terrain. The number and size of avalanche prone locations will increase with altitude.

Full-depth avalanches

Below approximately 2400 m individual full-depth avalanches are possible, including quite large ones. Caution is to be exercised in areas with glide cracks.

Danger levels

1 low

2 moderate

3 consider.

4 high

5 very high
