

Moderate avalanche danger will be encountered over a wide area

Edition: 26.3.2018, 08:00 / Next update: 26.3.2018, 17:00

Avalanche danger

region B **Level 2, moderate**

Old snow

Avalanche prone locations

Danger description

Avalanches can be released in near-surface layers in particular. The avalanche prone locations are to be found in particular adjacent to the ridge line and in pass areas and at transitions into gullies and bowls. Careful route selection is recommended.

Full-depth avalanches

Below approximately 2400 m individual full-depth avalanches are possible, including large ones in isolated cases. Caution is to be exercised in areas with glide cracks.
