

# Considerable danger of dry and wet avalanches will be encountered in some regions

Edition: 28.3.2018, 17:00 / Next update: 29.3.2018, 08:00

## Avalanche danger

**region B**

**Level 3, considerable**

### Fresh snow and snow drifts

#### Avalanche prone locations

#### Danger description

Fresh and somewhat older snow drift accumulations can be released by a single winter sport participant. Avalanches can reach dangerously large size. Natural avalanches are possible in isolated cases. Experience in the assessment of avalanche danger is important.

### Wet and full-depth avalanches

As a consequence of the rain wet avalanches are possible. Below approximately 2400 m full-depth avalanches are possible. In many cases these are dangerously large. Areas with glide cracks are to be avoided as far as possible.
