

# Considerable danger of dry and wet avalanches will be encountered over a wide area

Edition: 30.3.2018, 08:00 / Next update: 30.3.2018, 17:00

## Avalanche danger

region A

Level 3, considerable

### Snow drifts, old snow

#### Avalanche prone locations

#### Danger description

The fresh snow drift accumulations can be released easily or naturally. As the day progresses the previously small snow drift accumulations will increase in size. Avalanches can additionally in isolated cases be released in deeper layers. This applies in particular on very steep north facing slopes in little used backcountry terrain. Such avalanche prone locations are barely recognisable. Avalanches can reach medium size in isolated cases. Experience in the assessment of avalanche danger is required.

### Wet and full-depth avalanches

More wet avalanches are possible.  
Below approximately 2600 m full-depth avalanches are possible. These can reach dangerously large size. Areas with glide cracks are to be avoided as far as possible.

Danger levels

1 low

2 moderate

3 consider.

4 high

5 very high
