## Avalanche danger

### region C

### Level 3, considerable

### Fresh snow and snow drifts, old snow

#### Avalanche prone locations

#### Danger description

As a consequence of fresh snow and strong wind easily released snow drift accumulations will form. Small and medium-sized natural avalanches are possible as the snowfall becomes more intense. Avalanches can additionally in isolated cases be released in deeper layers also. Snow sport activities outside marked and open pistes call for extensive experience in the assessment of avalanche danger.

### Full-depth avalanches

Below approximately 2600 m full-depth avalanches are possible. These can reach dangerously large size. Areas with glide cracks are to be avoided as far as possible.
