

# For those venturing off piste a high avalanche danger will be encountered in some regions

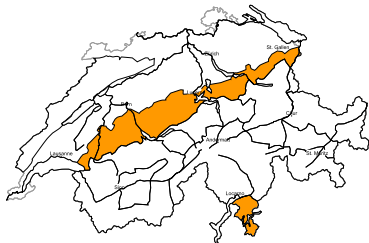

Edition: 31.3.2018, 08:00 / Next update: 31.3.2018, 17:00

## Avalanche danger

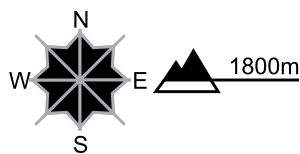

**region E**

**Level 3, considerable**

### Fresh snow and snow drifts

#### Avalanche prone locations

#### Danger description

As a consequence of fresh snow and wind snow drift accumulations have formed. These are mostly small but can be released easily. They are to be found in particular in gullies and bowls, and behind abrupt changes in the terrain. The snow drift accumulations are to be avoided in steep terrain.

### Full-depth avalanches

More full-depth avalanches are possible. These can reach medium size in isolated cases. Areas with glide cracks are to be avoided.

**Danger levels**

1 low

2 moderate

3 consider.

4 high

5 very high
