Avalanche danger

region B

Level 3, considerable

Fresh snow and snow drifts

Avalanche prone locations

Danger description

The fresh snow and snow drift accumulations of the last three days are in some cases prone to triggering. As a consequence of the northerly wind further snow drift accumulations will form. Avalanches can be released by a single winter sport participant. Individual natural avalanches are possible. Avalanches can reach medium size in isolated cases. Backcountry touring and other off-piste activities call for experience in the assessment of avalanche danger.

Full-depth avalanches

Below approximately 2600 m full-depth avalanches are possible. These can reach dangerously large size. Areas with glide cracks are to be avoided as far as possible.

Danger levels

1 low

2 moderate

3 consider.

4 high

5 very high
