

# Outside marked and open pistes a critical avalanche situation will be encountered in some regions

Edition: 1.4.2018, 08:00 / Next update: 1.4.2018, 17:00

## Avalanche danger

**region B**

**Level 3, considerable**

### Fresh snow and snow drifts

#### Avalanche prone locations

#### Danger description

The fresh snow and snow drift accumulations of the last three days are in some cases prone to triggering. As a consequence of the northerly wind further snow drift accumulations will form. Avalanches can be released by a single winter sport participant. Individual natural avalanches are possible. Avalanches can reach medium size in isolated cases. Backcountry touring and other off-piste activities call for experience in the assessment of avalanche danger.

### Full-depth avalanches

Below approximately 2600 m full-depth avalanches are possible. These can reach dangerously large size. Areas with glide cracks are to be avoided as far as possible.

**Danger levels**

1 low

2 moderate

3 consider.

4 high

5 very high
