

In the north significant warming. A precarious avalanche situation will prevail

Edition: 2.4.2018, 08:00 / Next update: 2.4.2018, 17:00

Avalanche danger

region E

Level 2, moderate

Wet avalanches as day progresses

Avalanche prone locations

Danger description

As the day progresses as a consequence of warming during the day and solar radiation there will be an increase in the danger of wet avalanches. Numerous small moist and wet snow slides are to be expected. Backcountry tours should be concluded timely.

Snow drifts

Fresh snow drift accumulations are to be evaluated with care and prudence at elevated altitudes. They are mostly small but in some cases prone to triggering. Apart from the danger of being buried, restraint should be exercised in particular in view of the danger of avalanches sweeping people along and giving rise to falls.
