

Increase in danger of wet and full-depth avalanches as the day progresses

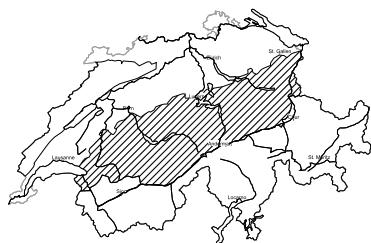

Edition: 6.4.2018, 08:00 / Next update: 6.4.2018, 17:00

Dry avalanches

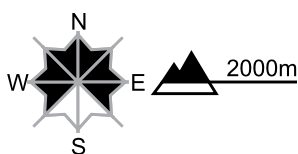

Dry, region C

Level 2, moderate

Snow drifts

Avalanche prone locations

Danger description

Fresh snow drift accumulations are in some cases prone to triggering. They are mostly small. The somewhat older snow drift accumulations can be released, especially at their margins. Backcountry touring calls for careful route selection.

Additional danger: Wet avalanches as day progresses (see 2nd map)
