

# Increase in danger of wet and full-depth avalanches as the day progresses

Edition: 6.4.2018, 17:00 / Next update: 7.4.2018, 08:00

## Dry avalanches

### Dry, region A

### Level 2, moderate

#### Snow drifts

#### Avalanche prone locations

#### Danger description

The snow drift accumulations of the last few days are in some cases still prone to triggering. They can especially at their margins be released. Apart from the danger of being buried, restraint should be exercised also in view of the danger of avalanches sweeping people along and giving rise to falls. Backcountry touring calls for careful route selection.

**Additional danger: Wet avalanches as day progresses (see 2nd map)**
