

Wet and gliding snow require caution

Edition: 14.4.2018, 17:00 / Next update: 15.4.2018, 08:00

Dry avalanches

Dry, region C

Level 1, low

Snow drifts

The mostly small snow drift accumulations of the last few days are clearly recognisable. They can be released in isolated cases especially at their margins. At elevated altitudes the prevalence and size of the avalanche prone locations will increase. Apart from the danger of being buried, restraint should be exercised in particular in view of the danger of avalanches sweeping people along and giving rise to falls.

Additional danger: Wet avalanches as day progresses (see 2nd map)
