

In the early morning a generally favourable avalanche situation will prevail. Full-depth and wet avalanches as the day progresses

Edition: 18.4.2018, 17:00 / Next update: 19.4.2018, 17:00

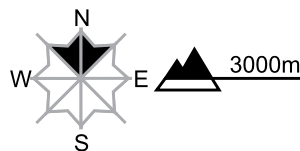

Dry avalanches

Dry, region B **Level 2, moderate**

Avalanche prone locations

Danger description

In high Alpine regions small snow drift accumulations have formed. Older snow drift accumulations can be released in isolated cases, but mostly only by large additional loads,. Careful route selection is advisable.

Additional danger: Wet avalanches as day progresses (see 2nd map)
