

Significant increase in avalanche danger as the day progresses

Edition: 23.4.2018, 17:00 / Next update: 24.4.2018, 17:00

Dry avalanches

Dry

Level 1, low

Individual avalanche prone locations for dry avalanches are to be found on extremely steep north facing slopes, in particular in high Alpine regions. Restraint should be exercised because avalanches can sweep people along and give rise to falls. In localities where more snow falls the avalanche danger is greater. Fresh snow drift accumulations are to be evaluated with care and prudence.

Additional danger: Wet avalanches as day progresses (see 2nd map)
